Designed to take the high heat output of solid-fuel furnaces, when installed under the duct.

- All stainless steel reservoir.
- Heavy duty long life motor and transmission assembly.
- Exclusive bronze Humid-Disc evaporator screens.
- See through observation port.

HUMID-AIRE MODEL FH-1000

This series has all the exclusive Humid-Aire features at a sensible price.

- Heavy duty fan cooled motor for extended life and quiet operation.
- Uses the see-through Handi-Hose for easy draining and checking water level.
- Durable Lexan® Reservoir.
- External water level adjustment without removing unit from its installation.
- Recessed drain channel to allow rapid flushing and cleaning action.
- Exclusive tilt in/tilt out mounting frame allows quick access for servicing.
- Separate float compartment.

The Humid-Disc Principle really works — thousands of window panes of moisture are exposed to warm air of furnace to give you the most efficient evaporation of water. No water is wasted down the drain. No chances for lime to block & restrict air passage the way conventional flow-through pad type humidifiers do.
